## Interest Rate Swaps

### Overview

An instrument in which two parties agree to exchange cash flows in the same or two different currencies, based on a notional amount, from fixed to floating or from one floating rate to another. The fixed rate is typically reset monthly, quarterly, semi-annually or annually though in some cases such as zero coupon Inflation Swaps, there is only one exchange of cash flows at maturity. The fixed rate may also be an off-market level whereupon payer and receiver agree an upfront payment to accommodate such, such as in ISDA Market Agreed Coupon swaps. In general, the floating rate can be almost any kind of index fixed asset price, but in the OTC markets we focus on interest rate instruments only, including but not limited to:

- Deposit indices such as Euribor, Libor, SOFR etc.
- Constant Maturity indices, e.g. 5Y IRS
- Inflation indices, e.g. UK RPI, French HICP, US CPI

General Definitions	
<b>Swap Transaction</b>	Any transaction which is a rate swap, basis swap, forward rate agreement, currency swap, cross-currency swap or similar transaction (and any combination thereof)
<b>Currency</b>	As agreed between Participants (Super-Major, Major & Non-Major Currencies)
<b>Fixed Rate Payer</b>	In respect of a Swap Transaction, a party obligated to make payments calculated by reference to a fixed rate
<b>Floating Rate Payer</b>	In respect of a Swap Transaction, a party obligated to make payments calculated by reference to a floating rate index
<b>Floating Rate Index</b>	Dependent on Currency and as agreed between Participants. A comprehensive list of indices can be found <a href="#">here</a> and with calculations in <a href="#">Articles 6 &amp; 7 of the 2006 ISDA Definitions</a> and the 2008 ISDA Inflation Derivatives Definitions.
<b>Up Front Payment Amount</b>	In respect of a Market Agreed Coupon Swap Transaction, the Upfront Amount Payment the Upfront Amount Payer will pay to the other Party

<b>Quoting Convention and Minimum Increment</b>	Dependent on Currency, Index, Tenor and Par or Market Agreed Coupon type for electronic Central Limit Order Books or as agreed by Participants for Voice Trading Facility trades.
<b>Minimum Size</b>	Dependent on Currency, Index, Tenor and Par or Market Agreed Coupon type for electronic Central Limit Order Books or as agreed by Participants for Voice Trading Facility trades.
<b>Confirmation</b>	Documents or other confirming evidence exchanged between the counterparties which confirm all of the terms of the Swap Transaction
<b>Business Day</b>	A day on which banks settle payments
<b>Date Convention</b>	The convention used for adjusting any relevant date that would otherwise fall on a non-Business Day (see conventions list)
<b>Term (Tenor)</b>	The total period of the Swap Transaction, starting on the Effective Date and ending on the Termination Date
<b>Effective (Start) Date</b>	The first date of the Term of the Swap Transaction, Spot or Forward starting, subject to the agreed Date Convention.
<b>Termination Date</b>	The last day of the Term of the Swap Transaction
<b>Maturity Date</b>	Start Date + Term (Tenor)
<b>First Fixing Date</b>	The first Index Fixing Date is zero, one or two business days (dependent on that Currency's market standard and according to agreed Holiday calendars) prior to the Start Date of the Swap.
<b>Trade Types</b>	The following swap types may be executed: <ul style="list-style-type: none"> <li>• Outright (Spot and Forward starting), Curve (tenor) Spreads, Butterflies, Spreads between different floating Indices, Spreads to Futures, Spreads to Treasuries and combinations thereof.</li> </ul>

### Currency Basis Swap, Float/Float

<b>Contract Definition</b>	<b>An agreement to exchange two streams of floating cash flows on a specified notional over a term to maturity.</b>
<b>Basis Spread</b>	A spread between two Floating Rate Indices (e.g. 3m Libor, 6m Libor, OIS Index, SOFR Index - See Appendix E) of the same currency (Super-Major, Major & Non-Major Currencies - see Appendix B).

<b>Basis Swap Types</b>	"Fra/Ois" (3m vs daily compounded OIS), 3v1, 3v6 or 6v3, 3v12, 6v12 or other combinations of floating indices as agreed by Participants.
<b>Specific Trade Types</b>	The following swap types may be executed: Outrights (Spot and Forward starting), Curve (tenor) Spreads, Butterflies
<b>Trading Conventions</b>	<ul style="list-style-type: none"> <li>Buy/Pay = Pay Floating (X)ibor Index Index 1 Flat, Receive Floating (X)ibor Index Index 2 + Basis Spread</li> <li>Sell/Receive = Receive Floating (X)ibor Index Index 1 Flat, Pay Floating (X)ibor Index Index 2 + Basis Spread</li> <li>Basis Spread Price quoted in increments of fractions or decimals of a basis point (see Appendix D).</li> <li>Leg 1 is usually the longer underlying index tenor, e.g. 3v1 rather than 1v3. Thus the 3m index is paid flat and the spread is added to the 1m index. The shorter index can be compounded, i.e. Q/Q = 3m index vs 1 quarterly payment consisting of 3 compounded 1m index settings OR the shorter index can be 3 separate monthly payments.</li> </ul>
<b>Swap Term (Tenor)</b>	As agreed by the Participants. A contract can have a Tenor from 3 months to 60 years.
<b>Swap Conventions</b>	<p><b>Floating Legs 1 &amp; 2:</b></p> <ul style="list-style-type: none"> <li><b>Index:</b> As agreed by participants and suitable to the Currency's market standards (e.g. 3m Libor, 6m Libor, OIS Index, SOFR Index - See Appendix E)</li> <li><b>Payment/Resets:</b> Annual, Semi-Annual, Quarterly, Monthly, Daily or as agreed by Participants.</li> <li><b>Day Count Conventions:</b> As dictated by Market Standard for each Index, e.g. Act/360, Act/365 etc (see Appendix C)</li> <li><b>Holiday Calendar:</b> As agreed by participants and suitable to the Currency's market standards.</li> <li><b>Fixing Calendar:</b> As agreed by participants and suitable to the Currency's market standards.</li> <li><b>Business Day Conventions:</b> Modified Following with adjustment to period end dates or as agreed by Participants and suitable to each Currency's market standards.</li> </ul>
<b>Periodic Settlement</b>	<p><b>Payment and Resets:</b></p> <ul style="list-style-type: none"> <li><b>Floating Legs 1 &amp; 2:</b> The payment amount of the Floating Leg is based on: Notional, Payment Frequency, Day Count Convention, Floating Interest Rate Index and Floating Reset Dates. Payments are settled in accordance with the payment frequency of the swap.</li> </ul>

### Cross-Currency Basis Swap, Float/Float

<b>Contract Definition</b>	<b>An agreement to exchange a stream of cash flows by applying a floating interest rate on leg 1 and a floating interest rate on leg 2 to a specified notional over a term to maturity.</b>
<b>Basis Spread</b>	A spread between the Floating Rate Indices (e.g. 3m Libor, 6m Libor, OIS Index, SOFR Index - See Appendix E) of two different currencies (Cross-Main-Main & Non-Main-Currency - see Appendix D)
<b>Basis Swap Types</b>	Floating Rate (X)ibor Index (e.g. 3m Libor) v Floating Rate (X)ibor Index (e.g. 3m Euribor), usually with the same Payment frequency, e.g. Q/Q Floating Rate OIS Index (e.g. Eonia) v Floating Rate OIS Index (e.g. FedFunds, SOFR), usually with the same Payment frequency, e.g. Q/Q

<b>Specific Trade Types</b>	The following swap types may be executed: Outrights (Spot and Forward starting), Curve (tenor) Spreads, Butterflies
<b>Trading Conventions</b>	<ul style="list-style-type: none"> <li>• Buy/Pay = Pay Floating Index Currency 1 Flat, Receive Floating Index Currency 2 + Basis Spread</li> <li>• Sell/Receive = Receive Floating Index Currency 1 Flat, Pay Floating Index Currency 2 + Basis Spread</li> <li>• Basis Spread Price quoted in increments of fractions or decimals of a basis point (see <a href="#">Appendix D</a>).</li> <li>• Notional amount set in Currency 1, e.g. 100m USD, payments Leg 1 in USD, payments Leg 2 in Currency 2</li> </ul>
<b>Swap Term (Tenor)</b>	As agreed by the Participants. A contract can have a Tenor from 3 months to 60 years.
<b>Swap Conventions</b>	<p><b>Floating Legs 1 &amp; 2</b></p> <ul style="list-style-type: none"> <li>• <b>Indices:</b> As agreed by participants and suitable to each Currency's market standard (e.g. 3m Libor, 6m Libor, OIS Index, SOFR Index - See Appendix E)</li> <li>• <b>Payment/Resets:</b> Semi-Annual, Quarterly, Monthly or as agreed by Participants.</li> <li>• <b>Day Count Conventions:</b> As dictated by Market Standard for each Index, e.g. Act/360, Act/365 (see Appendix C)</li> <li>• <b>Holiday Calendar:</b> As agreed by participants and suitable to the Currency's market standards.</li> <li>• <b>Fixing Calendar:</b> As agreed by participants and suitable to the Currency's market standards.</li> <li>• <b>Business Day Conventions:</b> Modified Following with adjustment to period end dates or as agreed by Participants and suitable to each Currency's market standards.</li> </ul>
<b>Periodic Settlement</b>	<p><b>Payment and Resets:</b></p> <ul style="list-style-type: none"> <li>• <b>Floating Legs 1 &amp; 2:</b> The payment amount of the Floating Leg is based on: Notional, Payment Frequency, Day Count Convention, Floating Interest Rate Index and Floating Reset Dates. Payments are settled in accordance with the payment frequency of either leg 1 or leg 2 as agreed between Participants. Cross Currency Basis Swaps are traded with an exchange of principle FX'd at both start date and maturity and may also be traded with intra-swap FX exchanges as required.</li> </ul>

### Cross-Currency Swap, Fixed/Fixed

## Constant Maturity Swaps

<b>Constant Maturity Swap (CMS), Float/Float</b>	
<b>Contract Definition</b>	An agreement to exchange two streams of floating cash flows on a specified notional over a term to maturity. The first floating rate is referred to as a Constant Maturity because the underlying asset is the daily fixing of a medium-term <a href="#">Interest Rate Swap</a> , typically 2Y, 5Y or 10Y. The second floating rate is a deposit index such as Libor.
<b>CMS Spread</b>	The spread between two floating rate indices of the same currency (Super-Major, Major & Non-Major Currencies - see Appendix B)
<b>CMS Types</b>	Floating ISDA Fix Constant Maturity (e.g. 5y IRS) vs Floating Rate (X)ibor Index (e.g. 3m Libor, 6m Euribor - See Appendix E) + spread
<b>Specific Trade Types</b>	The following swap types may be executed: Outrights (Spot and Forward starting), Curve (tenor) Spreads, Butterflies
<b>Trading Conventions</b>	<ul style="list-style-type: none"> <li>• Buy/Pay = Pays Floating (X)ibor Index + Spread, receives Floating CMS Index Flat</li> <li>• Sell/Receive = Receive Floating (X)ibor Index + Spread, pays Floating CMS Index Flat</li> </ul> <p>Basis Spread Price quoted in increments of fractions or decimals of a basis point (see Appendix D).</p>
<b>Swap Term (Tenor)</b>	As agreed by the Participants. A contract can have a Tenor from 1 year to 60 years.

## Interest Rate Options

### Overview

An interest rate option grants the buyer the right, but not the obligation, to either enter into an underlying instrument (payers or receivers swaption - usually cash settled at expiry) or a series of pay-offs based upon future index fixings (cap/floor). Exercise of this option is dependent upon the strike price agreed at the time of the original contract being "in the money" at expiry, i.e. higher than the fixing rate for a receivers swaption or floor (puts), lower for a payers swaption or cap (calls).

## Swap Options

Interest Rate Swaption	
<b>Contract Overview</b>	An option to enter into an Interest Rate Swap contract ('Underlying Swap') at pre-defined time(s), typically a <u>Fixed/Float IRS</u> with its Fixed Rate equal to the Strike.
<b>Type</b>	Payer = Correspond to paying the fixed rate in the Underlying Swap. Receiver = Correspond to receiving the fixed rate in the Underlying Swap.
<b>Trade Convention</b>	Buy = Buy the right to exercise the option. Sell = Sell the right to exercise the option.
<b>Trade Currency</b>	Available currencies as defined in 'Appendix B'.
<b>Trade Date</b>	Date on which the trade is conducted.
<b>Price Quote Convention</b>	Spot or Forward Option Premium quoted in increments of fractions or decimals of a basis point (see Appendix D).

<b>Premium Amount</b>	( Notional * Price )
<b>Premium Payment Date</b>	Date on which the Premium is paid by the Buyer to the Seller. Spot – Premium paid agreed number of business days after the Trade Date. Forward – Premium paid agreed number of business days after the Expiry Date.
<b>Strike</b>	Rate that will be used for the Underlying Swap on its inception.
<b>Minimum Notional</b>	As agreed by the participants, depending upon Currency, Expiry Date and Tenor
<b>Exercise Type</b>	European American Bermudan
<b>Expiry Date</b>	Exercise date(s) of the option. 1 day to 50 years from Trade Date.  <b>European</b> Exercise only on the Expiry Date and Time specified.  <b>American</b> Exercise is allowed at any time up to the Expiry Date specified.  <b>Bermudan</b> One or more pre-defined exercise times within a range of dates agreed between participants.
<b>Tenor</b>	Term of the underlying swap, 3 months to 50 years from Expiry Date.
<b>Settlement Type</b>	Cash Physical Cleared Physical Dates and conventions as defined by 'ISDA 2006 Definitions'.
<b>Payment Amount</b>	As defined by 'ISDA 2006 Definitions' according to Settlement Type.

## Commodities

<b>Product Name</b>	<b>Metal Options</b>
<b>Description</b>	<p>A metal option represents the purchase or sale of the right to buy or sell metal, rather than an outright purchase or sale. The metal that is the subject of the option is referred to as the underlying asset.</p> <p>An option therefore is the right but not the obligation to buy from, or to sell to, the seller (or grantor) of the option, an agreed quantity of the underlying asset at an agreed price (the strike price) up to or on an agreed date in the future (the expiration date). The buyer of the option may exercise his rights under the option up to that date. In the case where the seller of the option sells, or grants, the buyer of the option the right to buy the underlying asset, the option is termed a call option. If the seller of the option grants the buyer of the option the right to sell to him the underlying asset, it is termed a put option.</p> <p>Depending on Participants, a Metal Option may be a Commodity Trade Option and treated as per CFTC Rule 32.3.</p>

## Credit Derivatives

### Credit Derivative Product Details and Contract Specifications

#### Products

- Credit Default Swap Indices
- Credit Index Swaptions

#### Overview:

Credit derivatives provide an opportunity to hedge or acquire credit exposure on an underlying reference credit entity. In the event of a credit “event” such as default of the entity, a “buyer” of credit protection will be compensated

for losses whilst a “seller” of credit protection will be liable for the compensation amount. The underlying entity can be:

- a) a portfolio of single credits assembled as a standardized **reference index**
- b) a single credit (e.g. BMW)
- c) a “tranche” of credit risk based on an index portfolio. e.g. exposure to a defined proportion of the loss distribution associated with an index For example exposure to up to the first 3% of losses on an index.

*For this certification, we confine ourselves to standard reference indices as the underlying entity.*

### **Basic Credit Derivative contracts**

Credit exposure to the underlying reference entity can be achieved in two principal ways:

- a) via a "Credit Default Swap"

A credit default swap is a contract between two participants - “*Protection Buyer*” and a “*Protection Seller*”. Under the contract, the buyer pays a regular “*premium*” to the seller who in exchange agrees to compensate the buyer for losses if a “*Credit Event*” occurs (the definition of a credit event is specified under ISDA 2003 or ISDA 2014 definitions), at which point the contract terminates and a cash “*settlement*” is made to the buyer in accordance with ISDA CDS credit event auction guidelines. Versions of these are **Credit Default Swap Indices** based upon a standard reference index of underlying CDS (see below)

- b) via "Credit Default Swap Option (Swaption)"

A credit default swaption gives the buyer of the option, the right but not the obligation to enter into a credit default swap (as in a) above) i.e. “exercise” the option at the specified option “*expiry date*”. Option exercise is generally restricted to the expiry date – “*European style*” or less commonly may be executed at any time up to expiry – “*American Style*”. The most liquid contract is a Credit Default **Index** Swaption

### **Credit Default Swap Indices**

#### **Product Description:**

In 2004, *standardized* credit indices were introduced which are credit default swaps based upon rule-based portfolios of equally-weighted underlying credits from specific market sectors. There are two main index families based on geographical location: a) MARKIT CDX indices : comprising single credits from North America and Emerging Markets, and b) MARKIT ITRAXX indices comprising single credits from Europe, Asia and the Rest of World. The generic MARKIT CDX and MARKIT ITRAXX indices are subdivided according to the number and credit characteristics of their underlying constituents: both indices are serially issued every 6 months, rolling in Mar and September (generally on the 20th of the Month except for High Yield on 27th) with changes to portfolio constituents determined by polling of a group of investment banks. There is a standard set of tenors depending upon the portfolio (3, 5, 7 & 10yrs). A new series will have an associated *standard coupon rate* (premium) based upon the credit spreads of the underlying constituents – this is generally fixed (and displayed on SEF systems) at either 100bps or 500bps (though can be 25 or 1000bps in exceptional situations) depending upon the credit quality of the underlying entities, with an upfront payment offsetting the difference between this rate and the average spread of the portfolio. On issue date, the new series of an index comprising new portfolio and coupon is published. New series issuance and portfolio characteristics is administered by Markit Partners - see [www.Markit.com](http://www.Markit.com), and indices adhere to ISDA standard protocols - see [www.isda.org](http://www.isda.org). Credit event(s) on single names within a portfolio will result in a proportional erosion of its par value. CDX, MCDX and iTraxx Marks used in these Contract Specifications are marks of Markit North America, Inc. and Markit Indices Limited and have been licensed for use by BGC Derivative Markets, L.P.

#### Credit Index Swaptions

#### Product Description

A CDS option is an option to buy (payer swaption) or sell (receiver swaption) CDS protection on a specified reference entity at a fixed spread on a future date. Index swaptions are generally European with exercise at the expiry date of the option only. They are mainly traded on the main benchmark indices above and may be traded outright or against other swaptions or with the underlying index as a delta hedge. A delta hedged swaption effectively provides exposure to the volatility of the underlying index.

#### Terms & Conditions: MARKIT CDX and MARKIT ITRAXX Swaption

CREDIT INDEX SWAPTION

<b>Clearing</b>	The options are not cleared, the underlying may be cleared at ICE Clear Credit, CME Clearing or LCH.Clearnet SA as directed by CEA 2(h)1 or as agreed between Participants

*Credit Swap Indices and their construction, issuance and maintenance are administered by a 3rd party, Markit Partners, to ensure full standardization and maximum liquidity in the products. Principle features of the products as described by Markit Partners are Trade Efficiency, Liquidity, Transparency and Data Integrity. These features apply to the MARKIT CDX and MARKIT ITRAXX families of indices and serve to mitigate issues of price manipulation. As Credit Index Swaptions are based upon such indices and the contractual features of a swaption are well defined prior to transaction, these products also, by their nature are resilient to price manipulation.*

## Equity Derivatives

### Broad Market Index Equity Derivative Product Details and Contract Specifications

#### Equity Index Swaps

##### Product Description:

An equity swap is a product which allows the ability to gain exposure to the returns of an equity ("equity leg") in exchange for payment or receipt of regular fixed or floating payments ("floating leg") usually interest based plus a spread. Equity index swaps, for example, provide the opportunity to hedge exposure to a cash portfolio of index members without the physical sale of assets.

##### Example Terms and Conditions

*Options on Variance swaps are based upon highly liquid and transparent underlying indices with well-defined and accepted closing prices for the calculation of volatility and consequently the payoff of volatility/variance swap. The terms of the contract and the calculation algorithm are very well defined prior to a transaction so making the product resilient to price manipulation.*

## Variance & Volatility Swaps

## Product Description:

A variance swap allows the ability take a direct exposure to the volatility of an underlying equity index over the length of the swap. Taking a "long volatility" view entails buying volatility via a variance or volatility swap at a predetermined strike. If the realized vol is greater than the strike, there will be a profit and vice versa. Note that volatility and variance swaps differ simply as the name suggests in exposure to volatility and volatility<sup>2</sup> (variance) respectively. In addition to speculative applications, variance/ volatility swaps serve an important purpose in providing an opportunity to hedge or protect against times of market crisis when invariably asset volatility rises substantially.

# Non Deliverable Forwards

## Non Deliverable Forward

An NDF is a foreign exchange forward contract on a notional amount where no physical settlement of the two currencies takes place at maturity. Instead a net cash settlement is made by one party to another based on the difference of the two FX rates. The settlement is done using a pre-determined currency, typically USD, and is determined at an agreed fixing date, typically 1 or 2 days prior to settlement, using spot fixing rates. There is no exchange of principle or upfront payments on these contracts.

## Currency Options

### FX Currency Options

An FX option offers the right but not the obligation to buy or sell an agreed amount of one currency in exchange for an agreed amount of another currency at a specified future exchange rate (the strike price). An FX option may be either "European", whereby the right to exchange may occur only on a single date (the expiry date) or "American" whereby the right to exchange may occur on any date up to and including the expiration date as determined by the option buyer. Settlement of an "in-the-money" option is typically 1 or 2 days following the agreed expiry date. Settlement may be physical where a spot transaction at the strike price is executed or also cash, where participants exchange the net cash difference between the prevailing spot rate and the strike price.

## Non-Deliverable FX Options

### Overview

A Non-Deliverable FX option (NDO) offers the right but not the obligation to buy or sell an agreed amount of one currency in exchange for an agreed amount of another currency at a specified future exchange rate (the strike price), but using a net cash settlement made by one party to another based on the difference of the two FX rates (strike price rate and fixing expiry rate). An NDO is typically "European", whereby the right to exercise may occur only on a single date (the expiry date) but may also be "American" as agreed between Participants whereby the right to exercise may occur on any date up to and including the expiration date as determined by the option buyer. Settlement of an "in-the-money" option is typically 1 or 2 days following the agreed expiry date, using the spot FX Fixing rate of expiry date. Settlement is cash, where participants exchange the net cash difference between the prevailing spot rate and the strike price of an exercised NDO.
